

UV and water resistant labels

A combination of pigmented ink and various film and paper labels ensures that labels printed with the LX2000e are water and UV resistant. This durability allows easy attachment and lasting durability on shower and bath products, beverages, chilled foods and more!

With the LX2000e, you can produce extremely durable labels quickly and efficiently, while at the same time you save money and time with ease of use and reliable technology.

CONSISTENT TECHNICAL DEVELOPMENT

The LX2000e has about 3 times more ink per cartridge than the LX900e, so you can print more labels at once without having to replace cartridges. In addition, the system is certified to BS5609 Section 3 in conjunction with suitable label material, which means that the printer, ink and Primera materials printed with LX2000e are durable and resistant to UV and weather in accordance with GHS requirements.
